

GROUP RULES

Mobile Programming | Prog2007 -2025

Group 35

Group Members with Roles:

- Sara Paulina Boudzakhet (Group leader)
- Isak Edlund Halmrast (Product management)
- Sander Solberg (Tech lead)
- Marta Flatsetø Gausland (Product designer)

Group Dynamics and Meeting Schedule

How often will the team meet, how often will they work together or separately, who is in charge of organizing meetings, who takes notes?

The group will meet each Monday at 15:00 (omitting the need to organize the meetings each week). The group leader takes notes during meetings. It is primarily thought that participants work individually with tasks they have been assigned to.

Group Conflict

If there is a group conflict, what protocols do the teams have to resolve it?

Each group member has a deciding power in the topic the argument could best be categorized as.

Team Mates Missing or Dropping out

If a team member disappears for parts of the semester or drops out of the course, how will the team handle it?

An extraordinary meeting will be held to redistribute the missing person's workload. Roles may be reassigned as a cause of this.

Group Workflow

How will the team organize their workflow? Will Scrum, waterfall, or something else be used?

We will use scrum, as we do not have a very specific plan over the technical implementations of our application.

Group Backup Procedures

How will the team handle making and storing backups of reports, the codebase, and other files?

We will use Google Docs for our reports, and each member should have a local backup of our codebase. We will use git as source control.
